WHO WE ARE. WHAT WE STAND FOR.

ABOUT US

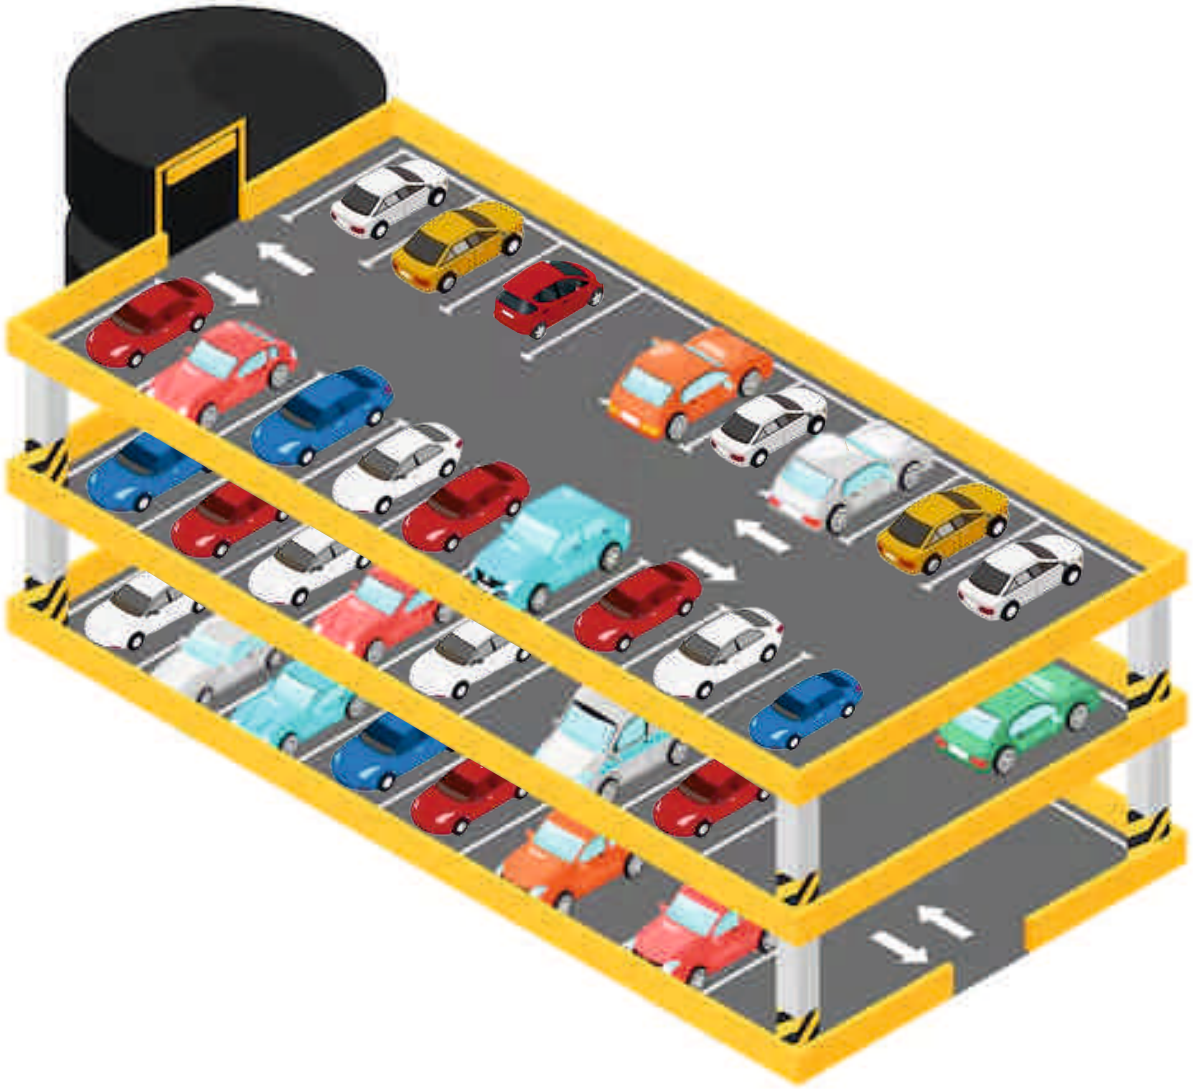

Cautomate is a turnkey provider of automated parking systems, specializing in design, manufacturing, installation, and service. Rooted in mechatronics—precision engineering, electronics, and mechanics—we deliver efficient, safe, and reliable parking solutions powered by advanced technology and expert teams.

With urban land becoming scarce and traditional parking consuming up to 80% of space for ramps and aisles, cities face congestion, emissions, and high construction costs. Cautomate's Automated Parking Systems (APS) solve these challenges by removing the driver from the parking process. Vehicles are stored through computerized, vertical stacking systems—maximizing space, reducing costs, and enabling cities to repurpose land for housing, green zones, or commercial use.

Seamless, safe, and space-smart—Cautomate is redefining the future of urban mobility.

SMART CAR PARKING

Parking today is more than just finding a slot for vehicles—it's about creating safe, efficient, and user-friendly spaces in apartments, malls, cinema halls, offices, wedding venues, and townships.

Traditional parking often leads to wasted space, delays, and safety issues. Modern solutions go beyond this—maximizing capacity, improving flow, and enhancing convenience for both owners and users.

At **CREINTORS**, we design six innovative parking systems that adapt to every need—whether it's for a small residential complex or a large commercial facility. Each system is built to deliver space efficiency, reliability, and ease of use.

STACK CAR PARKING

Stack systems are a simple yet effective way to double or even quadruple parking capacity within the footprint of a single car. Using mechanical or hydraulic platforms, a vehicle is lifted to create additional space below.

Cautomate offers Double, Triple, and Quad Stackers, available as standalone units or with shared vertical supports for added stability. While retrieval requires the ground-level spot to be free, the system is easy to operate and highly reliable.

Ideal for private garages, small apartments, and compact spaces, stackers can be installed on flat or sloped slabs, making them suitable for both new projects and retrofits.

CAUTOMATE STACK PARKING SYSTEM: REPRESENTATIVE SPECIFICATIONS

Feature	Specification
Lifting Capacity	2000 3000kg (single units); 4 8ton (select
Platform Dimensions (L	Approx.4.15 4.50m×2.6 2.7m
Lifting Height	Approx.2.2 2.3m
Power	1.7 7.5kW
Voltage	220 440V
Body Material	MS (Mild Steel) or SS (Stainless Steel)
Drive System	Hydraulic or Electric
Key Features	Fully Automatic Locking System

PUZZLE CAR PARKING

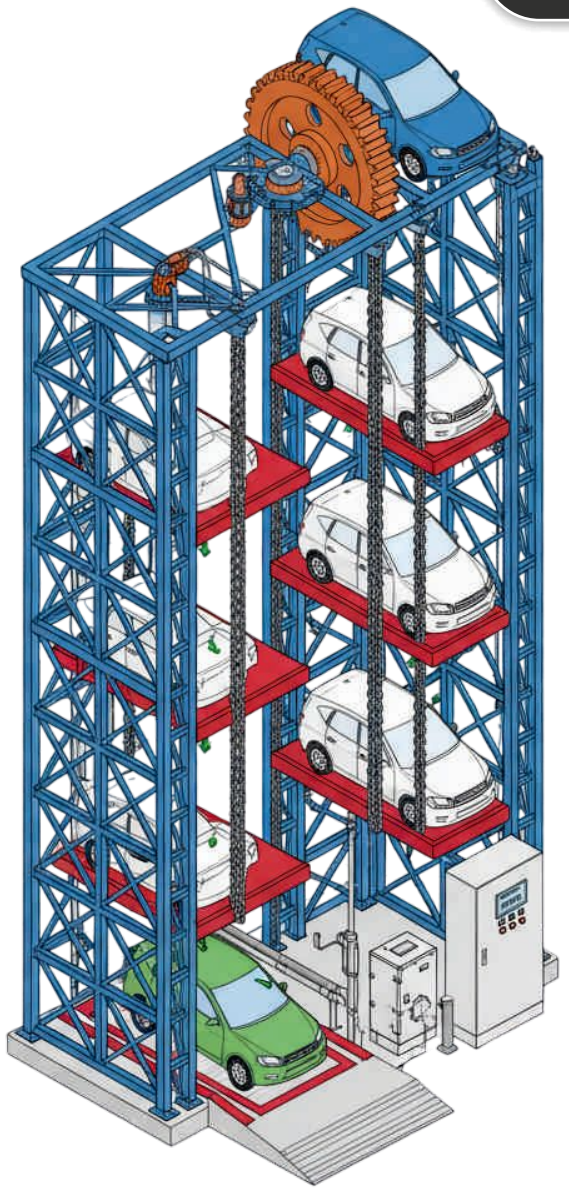

Also known as lift-and-slide systems, Puzzle Parking provides a smart, space-efficient solution for multi-level parking. Using a grid of pallets that move both horizontally and vertically, any car can be accessed independently—without shifting others. An empty slot per level acts as the “key” to solve the puzzle and retrieve vehicles smoothly.

Cautomate offers highly modular designs ranging from 2 to 7 levels, with the option of one or two underground pit levels for added capacity. This makes it ideal for offices, apartments, and residential complexes where space is limited and independent user access is essential.

CAUTOMATE STACK PARKING SYSTEM: REPRESENTATIVE SPECIFICATIONS

Feature	Specification
Load Capacity	Up to 6,000lbs or 3,000kg
Clear Height at Grade	Varies from 8ft (1-level) up to 45ft (7-levels)
Pit Depth	Approx. 6ft 10in 8ft
Stall Dimensions (L×W	Approx. 19ft 9in×8ft 2.5in
Operation	Electric, PLC-controlled with Manual Override
Key Features	Independent access, safety gates, limit switches, and audible alarms

CAROUSEL CAR PARKING

Also known as lift-and-slide systems, Puzzle Parking provides a smart, space-efficient solution for multi-level parking. Using a grid of pallets that move both horizontally and vertically, any car can be accessed independently—without shifting others. An empty slot per level acts as the “key” to solve the puzzle and retrieve vehicles smoothly.

Cautomate offers highly modular designs ranging from 2 to 7 levels, with the option of one or two underground pit levels for added capacity. This makes it ideal for offices, apartments, and residential complexes where space is limited and independent user access is essential.

CAUTOMATE CAROUSEL PARKING SYSTEM: REPRESENTATIVE SPECIFICATIONS

Feature	Specification
Capacity	Up to 16 sedans or 14 SUVs in two conventional spaces; up to 20 vehicle overall
Vehicle Weight	Up to 2500kg
Footprint	As small as 35.75m2
Retrieval Time	90 165seconds
Power	7.5kW
Drive System	Vertical Rotary Mechanism

TOWER CAR PARKING

Tower Systems are a fully automated, high-capacity solution designed for locations where land is extremely limited. Using a central elevator (SRU) and horizontal shuttles, vehicles are stored like in a robot-operated vertical warehouse, eliminating the need for human drivers and maximizing space.

These systems can be standalone or integrated into buildings, above or below ground, with heights up to 50 m. With the ability to park up to 70–100 cars in the footprint of just a few conventional spaces, Tower Parking offers unmatched space efficiency and long-term value.

CAUTOMATE TOWER PARKING SYSTEM: REPRESENTATIVE SPECIFICATIONS

Feature	Specification
Capacity	Parks up to 70 100+ cars
Space Utilizatio	Up to 85% of available space used for parking
Construction Height	Up to 50m
Design	Standalone or integrated into building
Entrance Type	Lower, middle, or top entrance type
Operation	Fully Automatic
Key Features	Reduced retrieval time due to independent operation, transporter options

WHY CHOOSE CAUTOMATE?

Cautomate's solutions are more than just parking; they're an investment in efficiency, profitability, and a superior user experience.

Financial Advantage: Drastically reduce the land area and construction costs required for parking. By maximizing space, our systems turn a necessary expense into a strategic asset that boosts your project's Return on Investment (ROI) and overall profitability.

Enhanced Safety & Security: Our enclosed systems offer unparalleled security, protecting vehicles from theft and vandalism. By separating drivers and pedestrians, we eliminate vehicle-pedestrian collisions, ensuring a safer environment for everyone.

Sustainable & Green: Cautomate is committed to a greener future. Our systems reduce emissions and fuel consumption by eliminating the need to circle for a spot. They also support Electric Vehicles (EVs) with integrated charging and can be designed with green facades to improve air quality.

Superior User Experience: Our solutions create a stress-free parking process that saves time and boosts satisfaction. This competitive advantage attracts and retains tenants and customers, directly increasing your property's value.
