Understanding you better

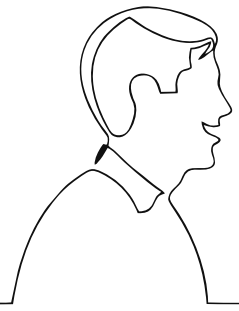

- Are your tools best utilised for their lives?
- Do you want your store Industry 4.0 enabled ?
- Do you want to reduce human time on tool management ?
- Is your insert and tool purchase consumption based ?
- Do you want 100% accountability of your tools?
- Do you want to automate your supply chain, ensuring anytime readiness of tools?

We understand the financial losses you incur, when cutting, inspection, maintenance tools and documents are not handled judiciously.

About Us

At Creintors = Creators + Innovators, we have young engineers who want to take up challenges to address customer pains. This catalogue showcases our Innovations in accountability, ease of handling and productivity of cutting tools, inspection tools and document access with safety.

Our research, development and customer feedback has helped co-create these proven range of products that are solutions for customer's problems, satisfying their latent needs.

Creintors Group of Companies founded by Mr.Neelesh Chougule in 2012 is providing solutions in areas of **Testing , Automation** and **Environmental Solutions** with a vision to contribute towards more value added products as solutions useful to the society.

With two decades of serving industry and engaging with youth to provide solutions to the society, the organization has taken key roll in collaborating with academia and provide real time exposure to the students and faculties. This is helping create an ecosystem for mutual growth for students and local industries.

Holistic Approach

Is our Uniqueness

Vision

To be a preferred partner, providing innovative and sustainable technological solutions, to accomplish end to end customer requirements under one roof, with quality and on-time completion as our motto, built on a strong foundation of customer-supplier relationship and our social commitments to the society.

Our Belief is in Simplicity

Optimum Design

"The best design is always simple and a simple design the most optimum"

Our passion driven by trust of customer as a partner helped us establish this approach to deliver our innovations addressing their pains.

We are System Driven

Sustenance

Integrated Management Systems (IMS)certified company, re-inforcing our commitment to:

- Environment - EMS : ISO 14001
- Team's Safety - OHAS: ISO 45001
- Customer - QMS: ISO 9001
- Information Security - ISMS: ISO 27001

Our Approach is Unique

Co - Creation

Problem well defined is half solved, to do so our customers need to express it **correct** and our team needs to understand it **correct**. This is not just said and done, there needs to be a tool or methodology. We follow **"Quick Fail"** concept to encourage our team to demonstrate their concepts to customers and help them confirm their requirements. This saves overall time to realise the solution, builds mutual trust and strengthens partnership with our customers.

Let our Solutions
be part of your

Sustainable Growth Story

iIMS 500

A Mini Insert Keeper

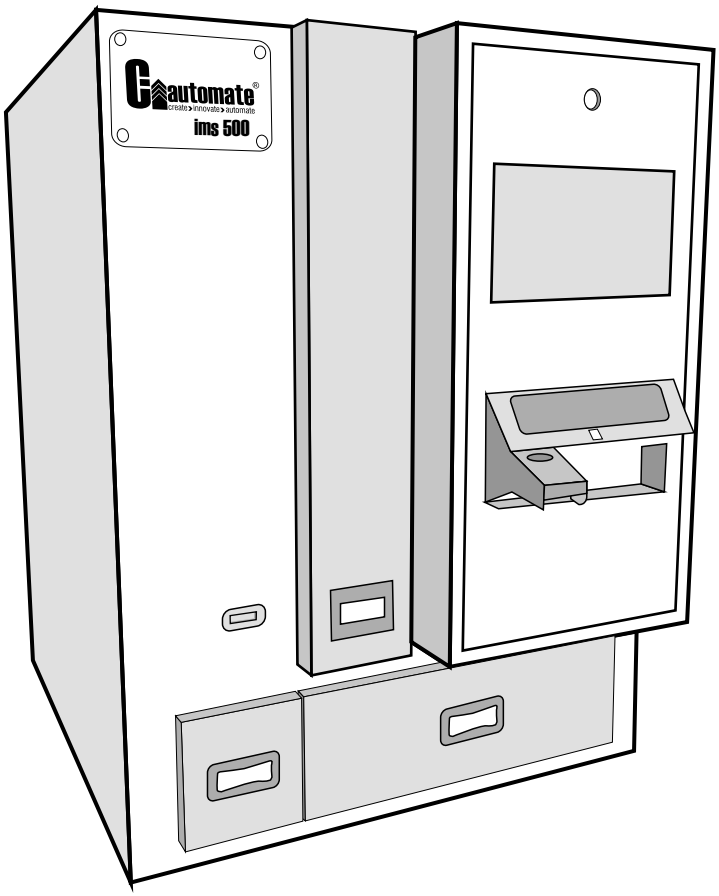

4.0 INDUSTRY 4.0 ENABLED SOLUTION

Small yet sets a Culture

Intelligent Insert Management System iIMS 500 is a machine designed to meet the needs of CNC machine-shops who require to store 500 inserts (locations) or 2000 (=500x4) inserts. Our customers say, that this product encouraged them to take their first step in direction of complete accountability of Inserts, both new and used, treated with same importance.

iIMS 500

A Mini Insert Keeper

Features

- **Used Inserts Accounted:** Collects the used insert for issue of every new insert. Preference can be set to use the reusable / lapped inserts.
- **24X7 Accessibility:** Inserts can be accessed round the clock for continual operations.
- **Fast Retrieval:** Insert can be received in less than one minute thus saving time in overall transactions with digital documentation.
- **Complete Accountability:** RFID / QR/ Barcode identification interfaced with the intelligent system software ensures complete accountability of inserts and users. Auto purchase order generation based on inventory level set for respective items.
- **Live Reporting:** Customised reporting for faster decisions ensuring readiness of inserts all the time.

Technical Details

- Insert protection is taken care by storing it in a compact plastic box / container.
- Product Model No. – iIMS 500
  with tool drawer provision
- Insert Storage Specifications
  a) New Inserts: 500 locations for 500 inserts or 500x4=2000 inserts
  b) Used inserts: 100 used inserts can be stored.
  c) Tools : 50 to 80 tools can be stored.
- Input supply : 220V AC, Single Phase, 3 Wire
- Foot print : 2000 mm x 2300 mm (considering maintenance)
- Total weight in empty Condition : 300 kg approx
- Maximum Pay-Load : 75 kg approx

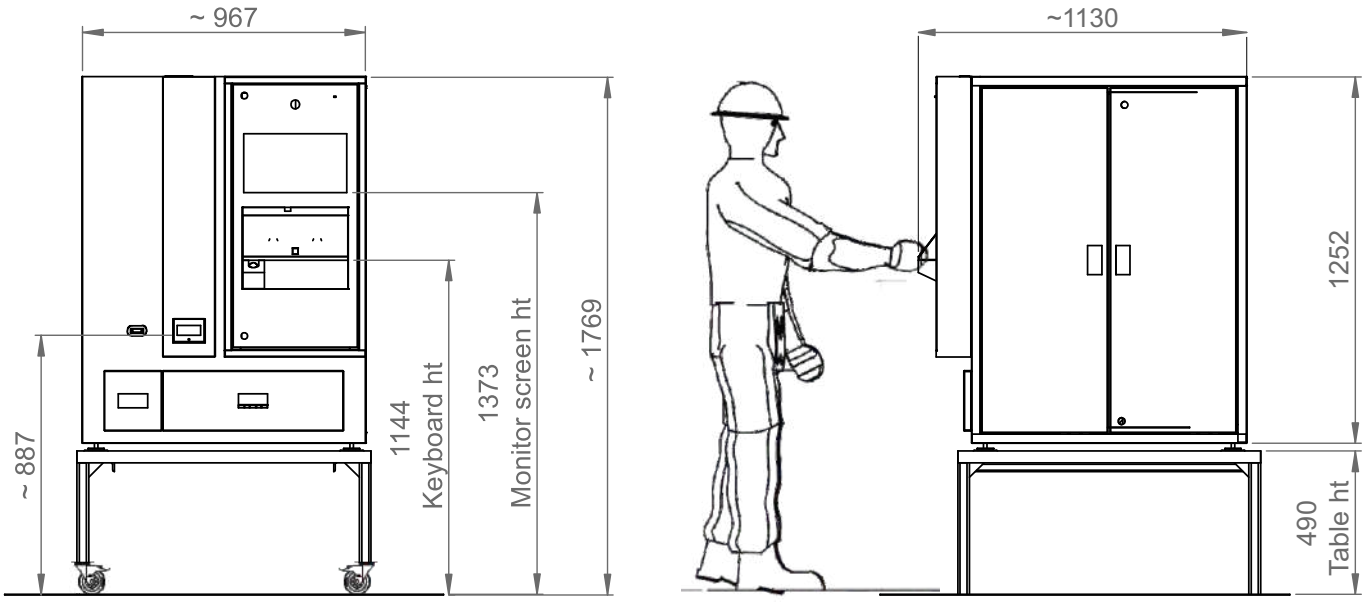

Industry 4.0 Features

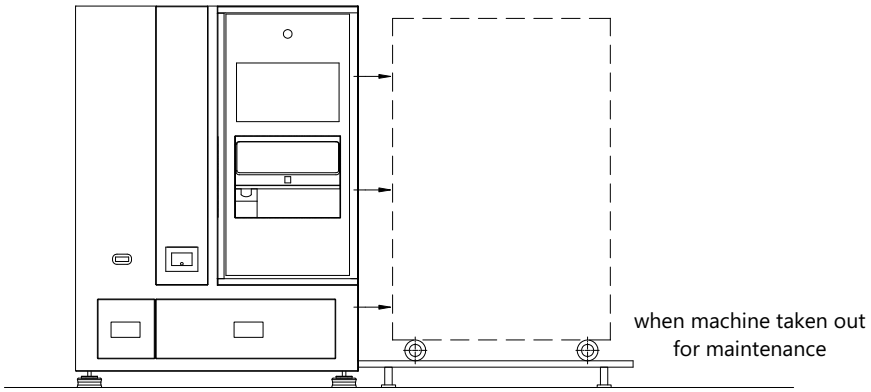

- **ERP Integration**: Machine can be interfaced with any ERP for Information Management. This comes as a basic feature for integration and can be upgraded with Artificial Intelligent tools along with our Production Planning and Control Software and Supply Chain Management Software, which are part of Creintors Information Flow Solutions (IFS).
- **Adaptable with TDM Software**: This Add-On feature enables customers to interface rich library of CNC tools with CAD / CAM, tool life monitoring and networking with CNC machines, tool presetters etc, thus providing complete integrated solution.

Overall Dimensions of Machine (with Table) 970mm (W) x 1130mm (D) x 1770mm (H)

Machine Layout

Scan QR for Video

Easy Access for Service and Maintenance

Machine Handling

- Caster wheels are provided to move machine anywhere within workshop on smooth and level surface.
- To lift machine either use eye bolt provided on top of the machine or use fork lift within marked location on the machine for lifting .
- Move to any preferred location and Plug-In for immediate use.

24/7 Machine Readiness

By design we ensure:

- Online / Remote Service Support
- Periodic Training of operator
- Ease of Maintenance

iIMS 2000

Insert Keeper with More Space

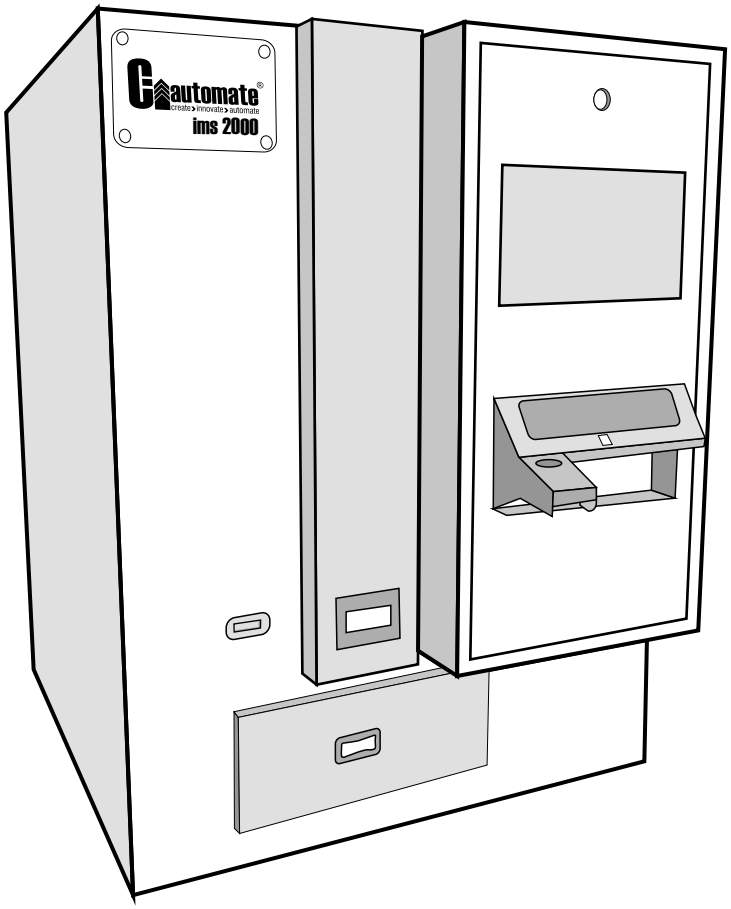

4.0 INDUSTRY 4.0 ENABLED SOLUTION

Big to manage more

Intelligent Insert Management System iIMS 2000 is designed for the bigger needs of CNC machines, to store 2000 inserts (locations) or 8000 (=2000x4) inserts. Bigger space encourages to also provide customised size of insert locations and also the quantity. Our unique feature of complete accountability gives equal importance for new and used inserts.

iIMS 2000

Insert Keeper with More Space

Features

- **Used Inserts Accounted:** Collects the used insert for issue of every new insert. Preference can be set to use the reusable / lapped inserts.
- **24X7 Accessibility:** Inserts can be accessed round the clock for continual operations.
- **Fast Retrieval:** Insert can be received in less than one minute thus saving time in overall transactions with digital documentation.
- **Complete Accountability:** RFID / QR/ Barcode identification interfaced with the intelligent system software ensures complete accountability of inserts and users. Auto purchase order generation based on inventory level set for respective items.
- **Live Reporting:** Customised reporting for faster decisions ensuring readiness of inserts all the time.

Technical Details

- Insert protection is taken care by storing it in a compact plastic box / container.
- Product Model No. – iIMS 2000
- Insert Storage Specifications
  a) New Inserts: 2000 locations for 2000 inserts or 2000x4=8000 inserts
  b) Used inserts: 100 used inserts can be stored.
- Input supply : 220V AC, Single Phase, 3 Wire.
- Foot print : 2000 mm x 2300 mm (considering maintenance)
- Total weight in empty Condition : 700 kg approx
  Maximum Pay-Load : 120 kg approx

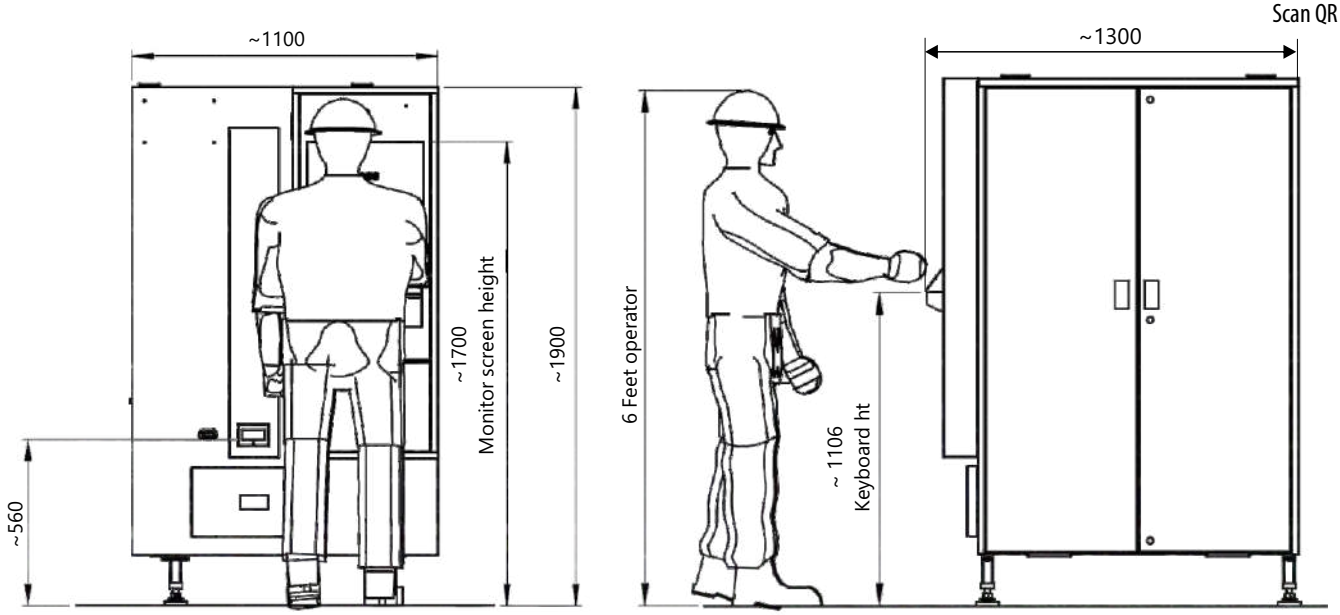

Industry 4.0 Features

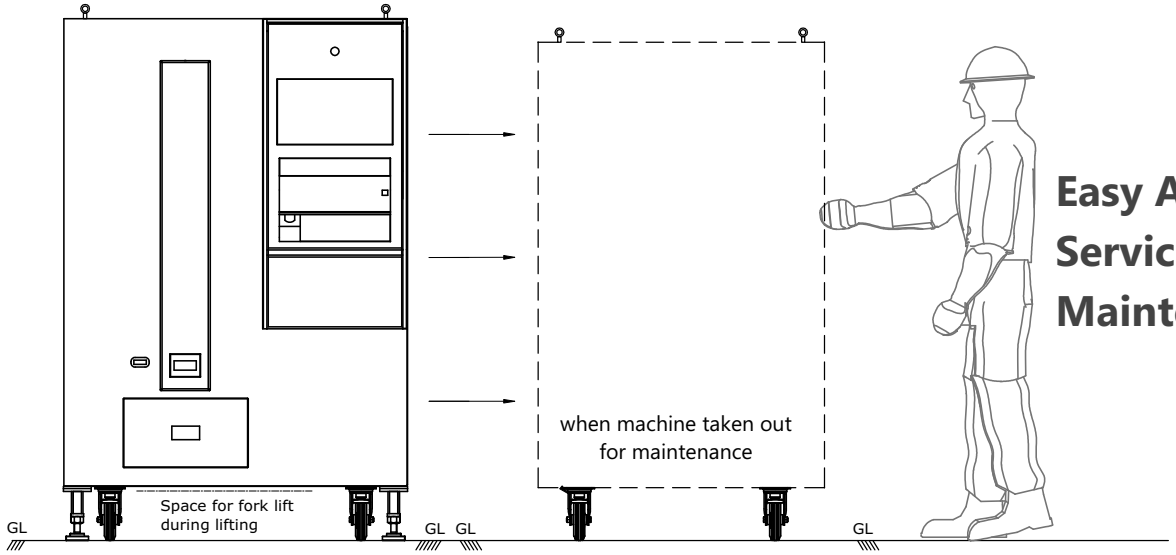

- **ERP Integration**: Machine can be interfaced with any ERP for Information Management. This comes as a basic feature for integration and can be upgraded with Artificial Intelligent tools along with our Production Planning and Control Software and Supply Chain Management Software, which are part of Creintors Information Flow Solutions (IFS).
- **Adaptable with TDM Software**: This Add-On feature enables customers to interface rich library of CNC tools with CAD / CAM, tool life monitoring and networking with CNC machines, tool presetters etc, thus providing complete integrated solution.

iITMS 1000

Keeper with Space for All

CII INDUSTRIAL INNOVATION AWARDS 2016
Best Manufacturing Start - Up

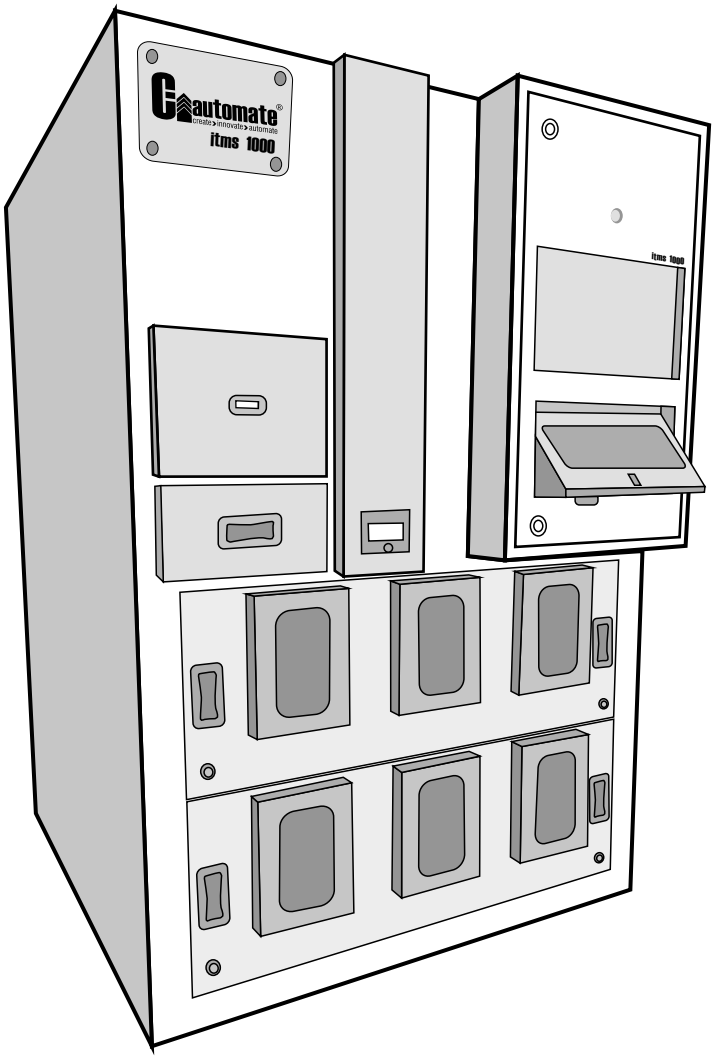

4.0 INDUSTRY 4.0 ENABLED SOLUTION

Bigger that accommodates variety

Intelligent Insert and Tool Management System iITMS 1000 is designed for storage and retrieval of both inserts and cutting tools like drills, taps, end mills, special tools etc with 100% accountability of each insert and tool, be a new or used. The standard design accommodates 600 inserts (locations) or 2400 (=600x4) inserts and 350+ tools, this composition can be modified as per the customer requirement.

iITMS 1000

Keeper with Space for All

Features

- **Used Inserts Accounted:** Collects the used insert / tool for issue of every new insert/ tool. Preference can be set to use the reusable / lapped inserts / tools.
- **24X7 Accessibility:** Inserts can be accessed round the clock for continual operations.
- **Fast Retrieval:** Insert can be received in less than one minute thus saving time in overall transactions with digital documentation.
- **Complete Accountability:** RFID / QR/ Barcode identification interfaced with the intelligent system software ensures complete accountability of inserts and users. Auto purchase order generation based on inventory level set for respective items.

Technical Specifications

- Product Model No. : iITMS1000
- Input supply : 220V AC ,Single Phase, 3 Wire.
- Space required : 2500 mm x 2000 mm (considering maintenance)
- Total weight in empty Condition : 750 kg approx
- Maximum Pay-Load : 300 kg approx
- New insert collection : 1150 mm approx Height

Tool Details (can be customised)

Tools Dimensions (mm)	Quantity (Nos)
Dia. 3-11, 200 height	260
Dia. 12-26, 200 height	88
Dia. 27-50, 180 height	22
Inserts	Min. 600 to 2400

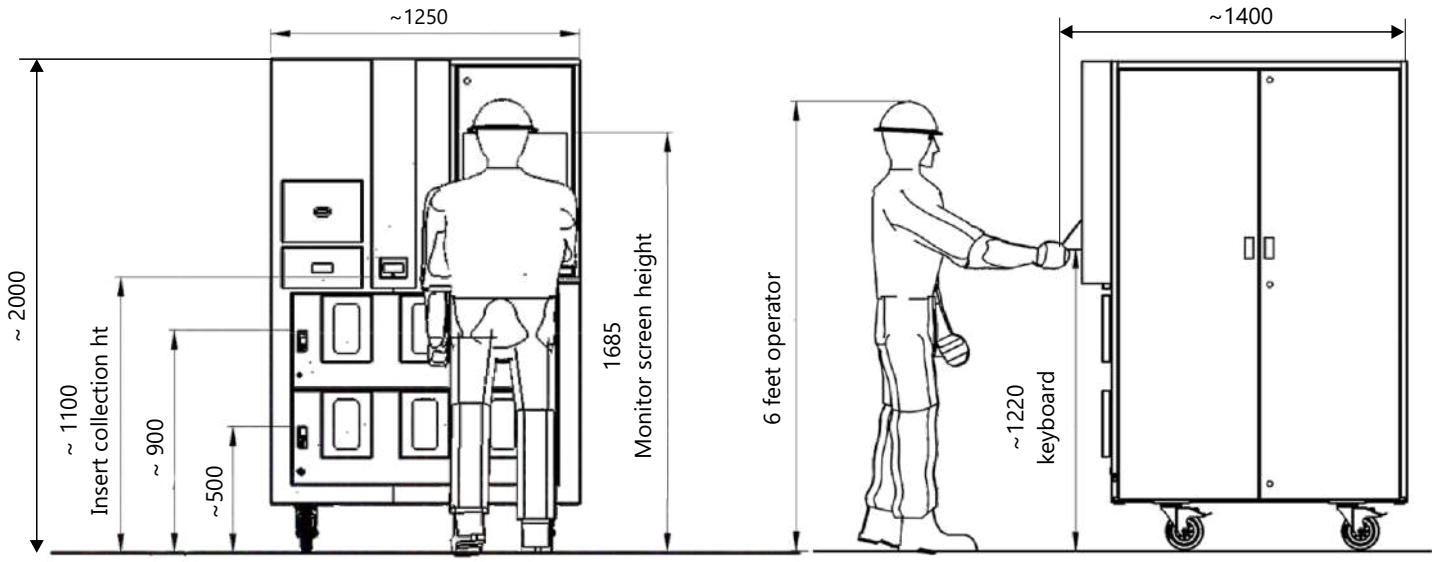

Overall Dimensions of Machine

1250mm (W) x 1400mm (D) x 2000mm (H)

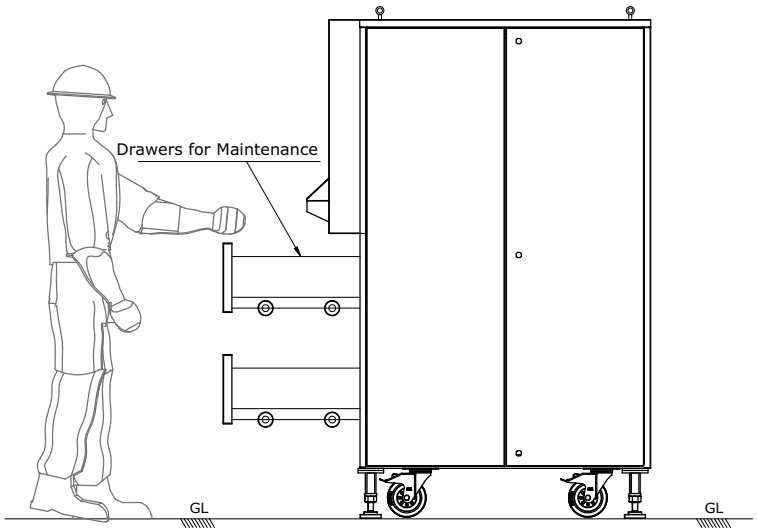

Note : Total 6 to 7 Nos of assemblies from above data can be customised accordingly.

iTMS Series

Keeper that Expands

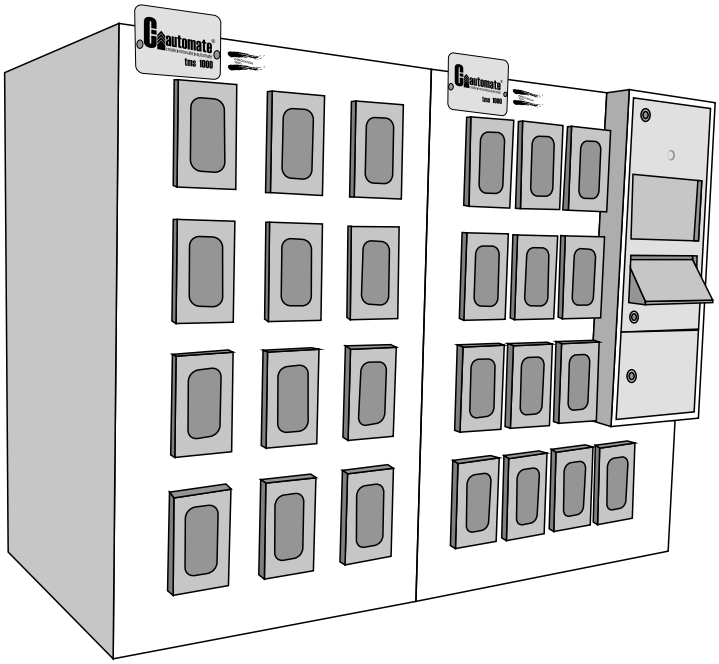

4.0 INDUSTRY 4.0 ENABLED SOLUTION

Biggest modular by design

Intelligent Tool Management System iTMS 1000 is designed for storage and retrieval of both insert packets and cutting tools like drills, taps, end mills, special tools etc with 100% accountability of each insert and tool, be a new or used. This is completely a customised modular design where the customer can add-on the modules to store more as per the need. Our expertise is in providing optimum design to store more in a given space.

iTMS Series

Keeper that Expands

Features

- **Used Inserts / Tools Accounted:** Collects the used insert / tools for issue of every new insert/ tool. Preference can be set to use the reusable / lapped inserts / tools.
- **24X7 Accessibility:** Inserts can be accessed round the clock for continual operations.
- **Fast Retrieval:** Insert can be received in less than one minute thus saving time in overall transactions with digital documentation.
- **Complete Accountability:** RFID / QR/ Barcode identification interfaced with the intelligent system software ensures complete accountability of inserts and users. Auto purchase order generation based on inventory level set for respective items.
- **Live Reporting:** Customised reporting for faster decisions ensuring readiness of inserts all the time.

Industry 4.0 Features

- **ERP Integration**: Machine can be interfaced with any ERP for Information Management. This comes as a basic feature for integration and can be upgraded with Artificial Intelligent tools along with our Production Planning and Control Software and Supply Chain Management Software, which are part of Creintors Information Flow Solutions (IFS).

Why intelligent IMS / ITMS / TMS?

IMS/ITMS/TMS is an Insert and Tool Management System which is one Innovative solution for storing inserts and tools in the compact space and design that allows to place inside any CNC shop, saving time and efforts to travel to central store.

Why do you call it as Intelligent?

The proof of Accountability to issue and collect the used Insert for re-use or scrap makes it intelligent. The data handling and reporting adds further intelligence, to help decision making.

What are the benefits of IMS/ ITMS / TMS for CNC Industry?

Considering the right tool availability, at right time which is the primary function, this machine stands strong to serve, giving same importance for new and used Inserts and Tools with 100% accountability. This is our Uniqueness.

Are the Inserts handled safely to Issue and Collect ?

Every Insert and Tool is assured not to contact with each other during all the transactions of the machine. Our special designed Insert and Tool containers make this happen.

What are the safety considerations for the machine user, authorised admin and maintenance personnel?

Every Users safety is addressed considering the operations they perform with easy, self explanatory instructions and accident proof control logic design, both during operation and maintenance.

Do we require a skilled operator to operate these machines?

No. Any User who operates a Cellular Phone/Mobile/TV Remote can operate this machine. The Voice Instructions further adds to the comfort of use to the users. Our simple but impressive user interfaced screen design makes this possible. Control access gives navigation through different modules. Every User is provided with authorized control access to navigate through features to make him/her and the system more Intelligent and Productive.

Can the machine be moved from one place to other and plugged to start?

Yes. For ease of movement on the shop floor, Caster wheels are provided and Lifting hooks are also provided on top of the Machine for lifting. So take to any location plug-in 230V AC, Single phase and the ethernet cable / Wi-Fi for connect.

Can the machine be integrated with CNC machine and tool database?

Yes, can be provided as an Add-On feature. We have collaboration with well know German company "TDM Systems" for advanced software. The exhaustive tool database and various advanced software modules can help to establish complete connect starting from product design to machining.

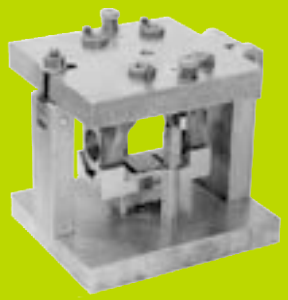

Can the machine be diagnosed online for any un-addressable issue by customer's maintenance / service team?

Yes. Our machine control design and online communication interface helps us address any issue online. This assures our customers of least down time. 24 x 7 Service Support has been our USP.

*i*VC Series

More Vertically Tall for All

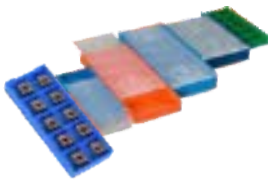

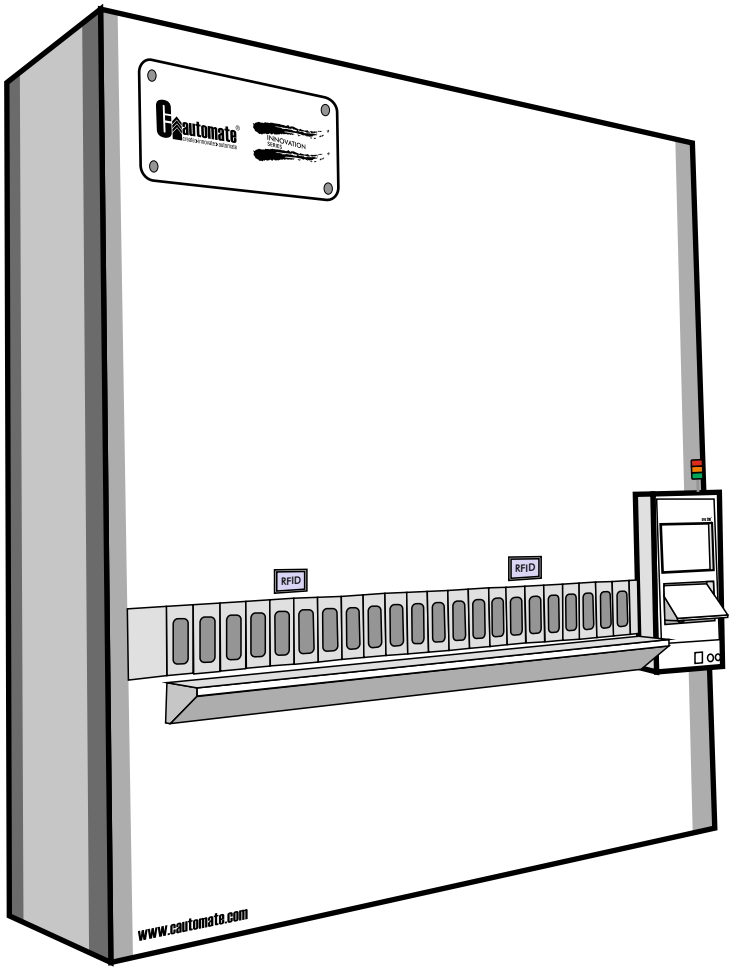

4.0 INDUSTRY 4.0 ENABLED SOLUTION

Grow your space Vertically

Our Intelligent Vertical Carousels *i*VC series, unique offering is that it allows authorised access to only particular section of compartment with automatic positioning doors. Quick retrieval and store with variety of material stored at one place saves human time and effort in travel, search and documentation. Every mobile rack or carrier can store minimum 50Kg to 500Kg as per model selected. This product apart from machine tool industry can be used in Pharma, Jewellery, Textile, Banking and Corporate Offices.

iVC Series

More Vertically Tall for All

» Unique Security with Reporting

Lockable front doors or position control doors opening provides the unique security feature to ensure 100% controlled access. Live Reports along with track of every transaction from any remote location, pick product by carrier number or part number and host interface capability for Advanced Inventory Management and Control strengthens to this security.

» Highly Productive

Fast retrieval due to higher speed and shortest path logic built-in.

» Optimum Space Utilization

Every carrier can include shelves and side extendable dividers to create discrete storage locations, thus optimum storage apart from utilising the available vertical height and reducing the floor space requirement.

» Complete Accountability

RFID / QR/ Barcode identification ensures complete accountability of items and users. Interface to weighing system enables to confirm required quantity of material accessed and stored.

Industry 4.0 Features

» **ERP Integration**: Machine can be interfaced with any ERP for Information Management. This comes as a basic feature for integration and can be upgraded with Artificial Intelligent tools along with our Production Planning and Control Software and Supply Chain Management Software, which are part of Creintors Information Flow Solutions (IFS).

» **Adaptable with TDM Software**: This Add-On feature enables customers to interface rich library of CNC tools with CAD / CAM, tool life monitoring and networking with CNC machines, tool presetters etc, thus providing complete integrated solution.

Why select Intelligent Vertical Carousel?

The electro-mechanical system interfaced with the software is designed to provide all the required features one smart process owner would like to have. Firstly, control access to user for only authorised material, with no option for mis-use. Secondly, every material transaction is recorded with respective material, location and time identification and thirdly apart from identification interface using Bar-Code, QR Code, other interface options like weighing machine, image processing etc can be provided. This is an Industry 4.0 enabled machine.

How many items (SKU's) fit in a Carousel?

Our standard design provides the flexibility accommodating optimum storage with unique identification of each material. Variety of SKU is limitless, you need to only select the right machine model / number of machines considering the space.

How does the Carousel improves the picking accuracy?

In a large warehouse or stores having vast list of SKUs, picking of multiple items by human leads to picking errors. Carousel improves picking accuracy by illuminating the location and quantity of the item to pick, and by double-checking the correct item selecting through scanning its Bar-code/QR code/ RF ID. Customers may also scan the order when placing the item into the order box for a triple-check. Weighing machine interface makes it more intelligent to assure the right pick and place, based on the weight of each item.

What kind of picking performance can expect?

At Carousel station picking can be performed for multiple sequence pick options for one User, to save time by eliminating multiple Re-confirmation's/ Logins using features.

Customer to select any one door design

Position Controlled Door or Hinged door for controlled material access is the mandatory choice of customer, considering the level of accountability required for the application.

Automatic Dispensing Solution - Optional

Automatic dispensing mechanism for container from the tray/carrier compartment with sliding door or hinged door mechanism.

What are the safety considerations for the machine user, authorised admin and maintenance personnel?

Every Users safety is addressed considering the operations they perform with easy, self explanatory instructions and accident proof control logic design, both during operation and maintenance. Additional safety and security features can be provided based on the application.

Can *i*VC be integrated with other solutions like ASRS and AGVs?

Can be integrated to any internal logistics or planning software or the other intelligent devices like AGV's and other ASRS Systems. Integrating any make of other systems to our system is our strength.

What happens if the Carousel breaks down?

The manual mode to retrieve and pick the material with same accountability with admin access, makes it a reliable solution for insuring no hurdle in customer operations. The online service interface to take the system online on remote and address makes it a 24 x 7 readiness machine. Your maintenance team enables us to give our best services, at least cost.

Why Intelligent Tool Cabinet (iTC)?

Our Tool Cabinet compact Digitised Mini-Store that can be placed nearest to the Machining Center or Cell of machines to maintain the accountability of the machine dedicated tooling along with that issued from central store.

The ERP interfaced with the Mini-Store monitors every tool transaction ensuring right tool used on right machine, for right operation with the intelligent logic building provision and also interface to the central store, to fill up the consumption. This assures the last mile accountability of tool just before use on the machine.

When to choose a horizontal drawer design?

When the size, shape and weight of the tools to be stored vary a lot demanding high flexibility.

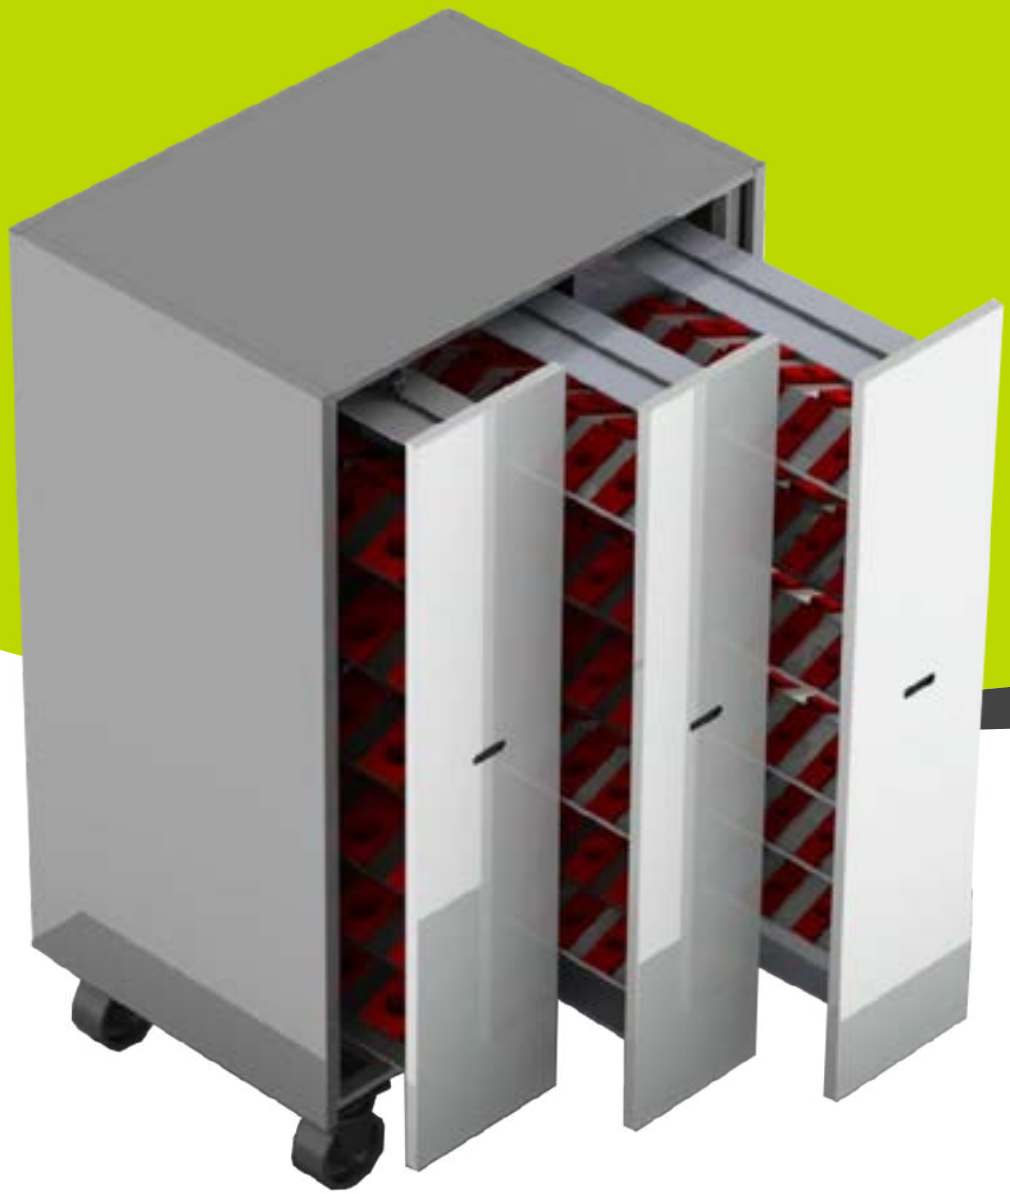

Is each cabinet customized by design?

Yes, every tool cabinet is customized by design to provide you as our standard product / solution.

The ERP interfaced with Mini-Store monitors every tool transaction ensuring right tool used on right machine, for right operation with the intelligent logic building provision and also to interface the central store, to fill up the consumption. This assures the last mile accountability of tool just before use on the machine.

iTC V200

Slide with Ease

Features

- **Consumption/User interface to central store:** Controlled access for using right tool for right operations at the last mile of use, interfaced with the central database system through ERP or Tool Management System Software.
- **24X7 Accessibility:** Tools can be accessed round the clock for continual operations
- **Fast Retrieval:** Tools can be received in less than one minute thus saving time in overall transactions with digital documentation
- **Complete Accountability:** RFID / QR/ Barcode identification interfaced with the intelligent system software ensures complete accountability of inserts and users. Auto purchase order generation based on inventory level set for respective items.
- **Live Reporting:** Customised reporting for faster decisions ensuring readiness of tools at all the time

Industry 4.0 Features

- **ERP Integration**: Machine can be interfaced with any ERP for Information Management. This comes as a basic feature for integration and can be upgraded with Artificial Intelligent tools along with our Production Planning and Control Software and Supply Chain Management Software, which are part of Creintors Information Flow Solutions (IFS)
- **Adaptable with TDM Software**: This Add-On feature enables customers to interface rich library of CNC tools with CAD / CAM, tool life monitoring and networking with CNC machines, tool presetters etc, thus providing complete integrated solution.

Technical Specifications

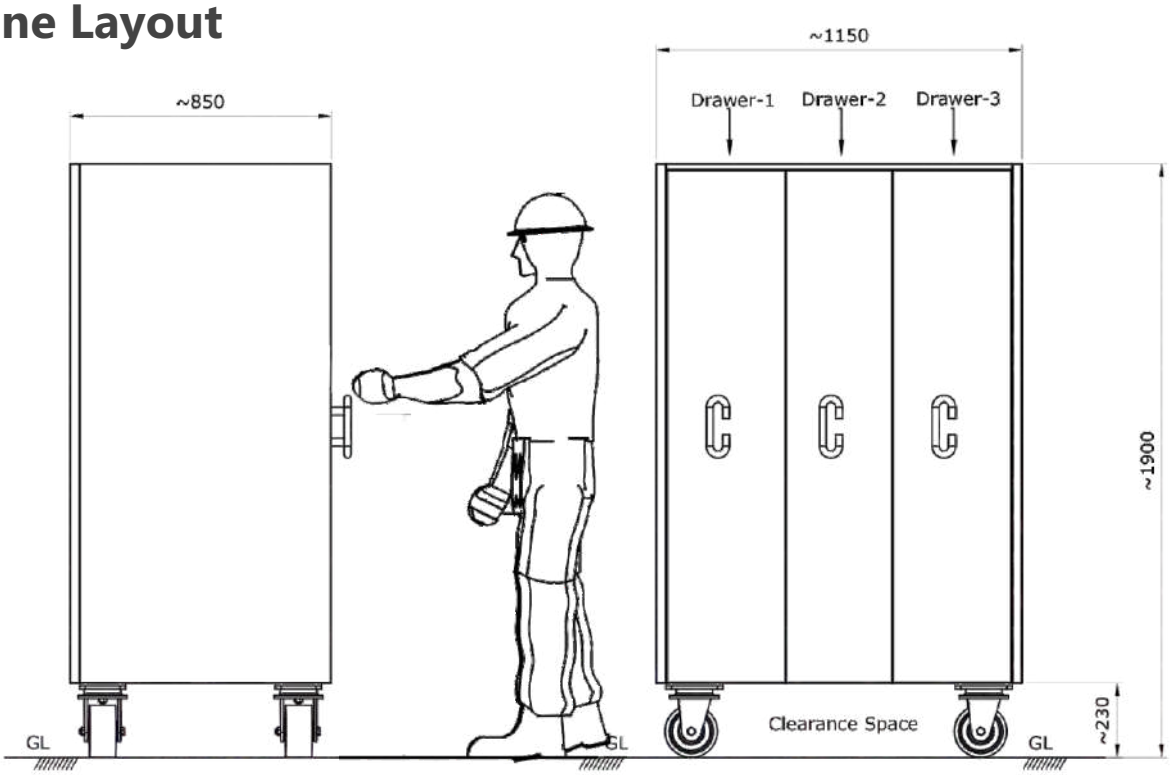

- Product Model No. : iTC V200
- Input supply : 220V AC ,Single Phase, 3 Wire.
- Space required : ~1600 mm x ~2000 mm (considering maintenance)
- Total weight in empty Condition : 450 kg approx

Tool Details (can be customised)

Drawers	No. of Carriers	Description	Storage Locations
Drawer - 1	6	BT 30 Tools Max. Length 180mm	72 Nos
Drawer - 2	6	BT 40 Tools Max. Length 180mm	72 Nos
Drawer - 3	6	BT 50 Tools Max. Length 180mm	48 Nos

Overall Dimensions of Machine 1900mm (H) x 850mm (W) x 1150mm (D)

Machine Layout

Machine Handling

- Caster wheels are provided to move machine anywhere within workshop on smooth and level surface.
- To lift machine either use eye bolt provided on top of the machine or use fork lift within marked location on the machine for lifting .
- Move to any preferred location and Plug-In for immediate use

Why Intelligent Tool Cabinet (iTC)?

Our Tool Cabinet compact Digitised Mini-Store that can be placed nearest to the Machining Center or Cell of machines to maintain the accountability of the machine dedicated tooling along with that issued from central store.

The ERP interfaced with the Mini-Store monitors every tool transaction ensuring right tool used on right machine, for right operation with the intelligent logic building provision and also interface to the central store, to fill up the consumption. This assures the last mile accountability of tool just before use on the machine.

24/7 Machine Readiness

By design we ensure:

- Online / Remote Service Support
- Periodic Training of operator
- Ease of Maintenance

When to choose a Vertical drawer design?

These are best used with symmetrical tools mostly diametrical with locators and adjustable shelves to cater the varying height. Example tool holders etc.

Is each cabinet customized by design?

Yes, every tool cabinet is customized by design to provide you as our standard product / solution.

4.0 INDUSTRY 4.0 ENABLED SOLUTION

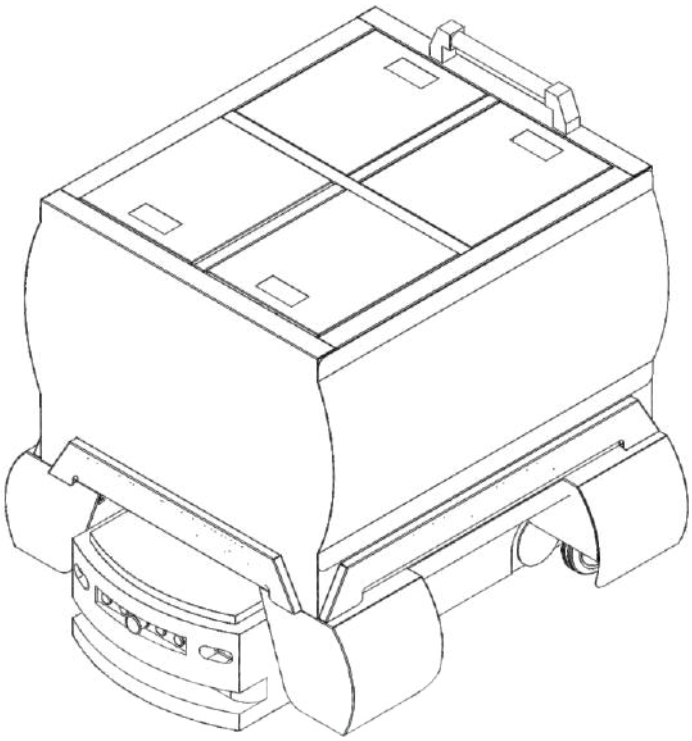

Self Mobility Coupled Tool Trolley

This Intelligent mobility enabled Tool Trolley iTT, is a mini store with Automated Guided Vehicle(AGV) for mobility option, ensures tool delivery with controlled access to right location to right process owner at right time. One trolley or series of trolleys can move at one time from the Tool Crib location to the required machine location. The trolley design can be customised to meet the application requirement and for enhancing the productivity of internal tool logistic by using our efficient Tool Logistic Management Software.

FAQ

When to choose an (iTT) Intelligent Tool Trolley ?

When you are concerned about the productivity of Right Tools reaching Right Machine in Right Time, along with its Digital Traceability and Control, this product/ solution becomes a need.

Why to choose iTT?

This Intelligent mobility enabled Trolley / Mini store with Automated Guided Vehicles (AGVs) ensure tool delivery with controlled access. One trolley or series of trolleys can move at one time from the Tool Crib location to the required machine location and back. This solution assures the last mile accountability of tools.

Is each Trolley / Mobile Mini Store customized by design?

Yes, every Trolley / Mini store is customized by design to provide you as our standard product / solution.

Are these trolleys ERP connected along with Logistic Management Software?

Yes every Trolley / Mini store is ERP enabled and for enhancing the productivity of internal tool logistics, our Tool Logistic Management Software can be interfaced as an Add-On.

This solution can be interfaced to any machine or cluster of machines and storage equipments with our Add-On hardware and upgraded system software.

Customised Solutions Provider

No more constraints

Steps to Digitise your Conventional Store

Accountability of tools digitally starts with small steps which we take pride in supporting which finally result in enhancing the productivity of overall machine shop operation. It's a three step process:

Step 1: Identification

Identifications of each and every tool along with human control system to ensure database of tool registration and issue / return through the digital system provided.

Step 2: Traceability

Once database is in place we interface software that enables every operation stake holder to visualise the tools in store and in use with the ERP interface.

Step 3: Accountability

With sustenance of step 1 and step 2 the operations can invest in more automated store and retrieval machine as given in this catalogue along with software upgrade to ensure shift from more human control to digital system control. Thus the operation transformation.

Digitally Integrated System

Creintors Software

We Adapt to your Operations Quickly

4.0 INDUSTRY 4.0 ENABLED SOLUTION

Software which knows you well

Our holistic approach helps us visualise and provide industry with complete **Information Flow Solutions**. We interface any machine with our software and hardware capabilities, making it simple for any operator to utilize the full potential of our solution example conventional machine and CNC machine with ERP, Tool Presetters etc to ensure visibility for enhancing productivity with no repeated work and first time right operation.

Note: Our machines and software are all in-house developed.

Key Software Features

Ownership At All Levels

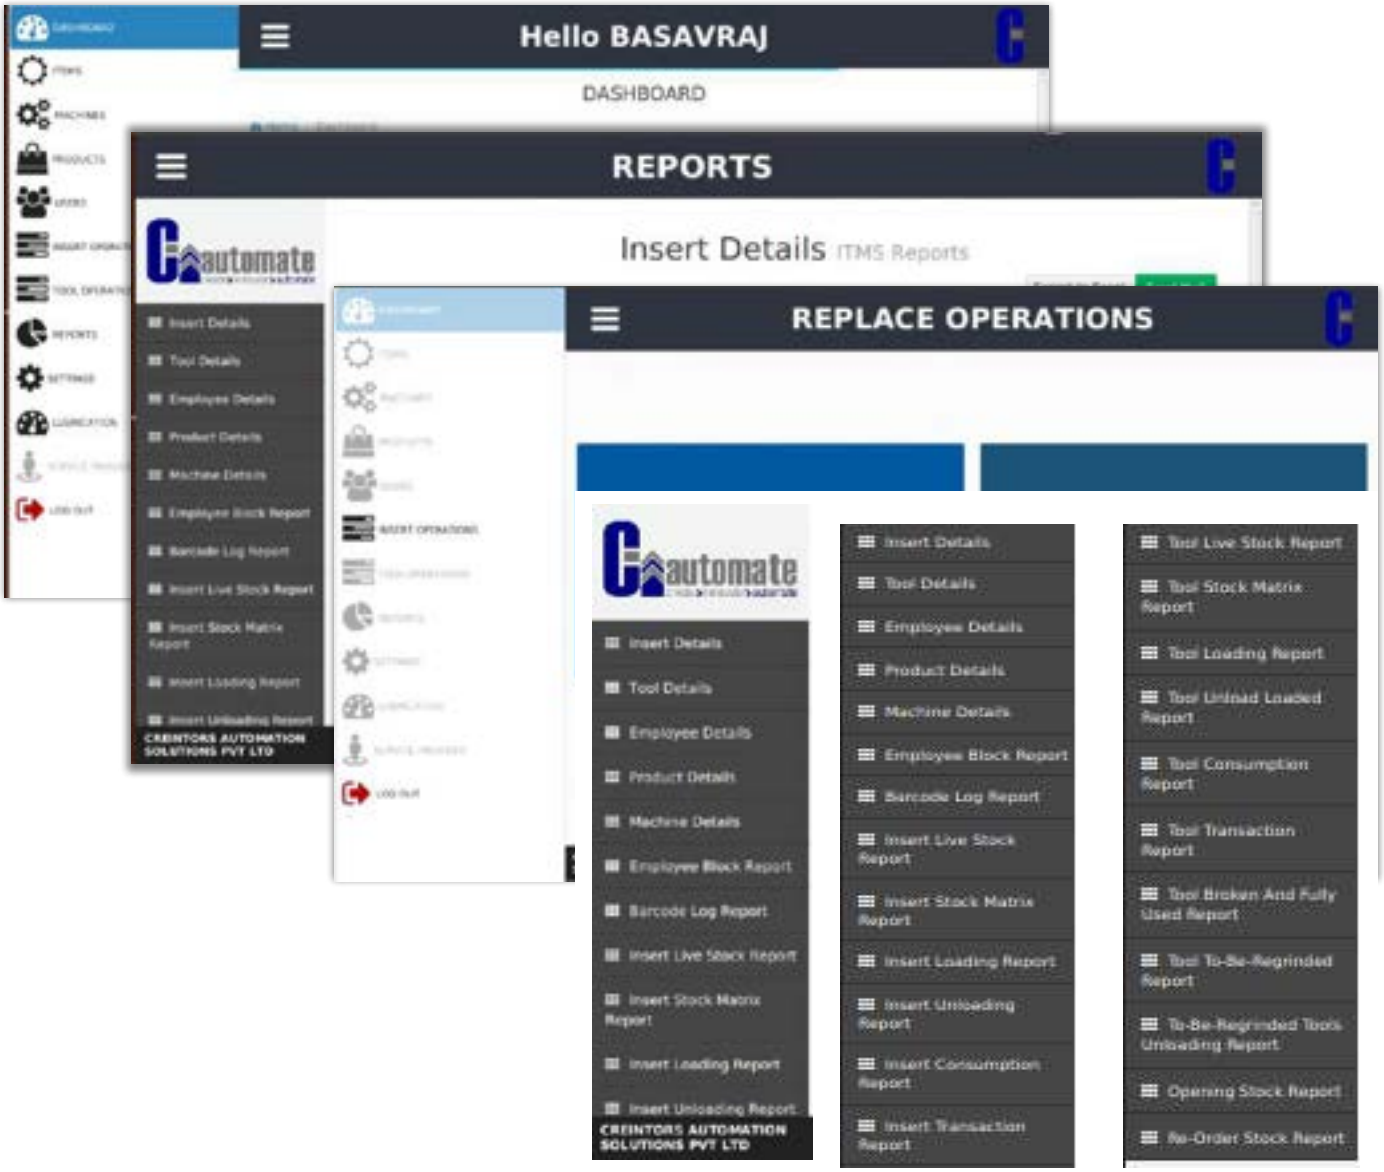

Each user gets a feel of the customised system for him/her and thus a comfort with ownership of the machines and tools.

ERP Interfaced Reporting

Visibility of consumption in relation with machine, product, operator and plant with respect to time gives effective control to the system admin, thus ensuring accountability with 24x7 readiness of tools.

Ease to Operate - User Screens

Human Machine Interface simplicity provided by our software design, helps the users to adapt quickly and reap the best benefits of our solutions. Any User who operates a Cellular Phone/Mobile/TV Remote can operate this machine. Control access screens give navigation through different modules. Every User is provided with authorized control access to navigate through features to make him/her and the system more Intelligent and Productive

Information Flow Solutions

Connect-Analyse-Deliver to Transform Operations

Production Planning and Control Software

Every manufacturing industry is challenged by day to day dynamic changes from customers, internal organisation and supply chain, for which the planning tools have to be dynamic and built to meet your requirements.

We ensure all the internal functions are integrated along with the supply chain digitally providing both the hardware and software solutions aligning to Industry 4.0 requirements.

ERP Solutions

Connecting your all functions is the Key for effective communication and thus control for any organisation. We partner with our customers to ensure all the expressed and latent requirements are fulfilled.

Tool Crib Management Solutions

We develop customised Tool Crib Management Software that interfaces all the tool data kept in any standard racks or cupboards or open locations to one platform. This digitization gives visibility, traceability and accountability at any point of time at any place.

Supply Chain Software Solutions

We develop customised Supply Chain Connect Software to ensure visibility and control of both information and material flow for delivering overall Productivity and Business Transformation.

TDM Systems

Software which knows your CNC Machine well

AN INDO - GERMAN COLLABORATION

INDO - GERMAN COLLABORATION

TDM Systems and Creintors Automation Solutions Pvt. Ltd. (C-Automate) have come together to provide dual benefits to the CNC machine owners and operators. This Indo-German collaboration is offering you the unique proposition of TDM Software and cost-effective dispensing with internal tool logistic solutions from C-Automate.

TDM Systems is a subsidiary company of Sandvik Group and is the leading software provider for managing tool data in the metal cutting industry. TDM Systems is the only software company in the world developing solutions for managing tool data since 1987. The focus of TDM Systems is on solutions and services for the entire life cycle of tool data. TDM Systems contributes to optimized planning and provision of metal-cutting tools by offering a wide range of interfaces.

What we do?
Professional Tool Data Management

- **SOFTWARE** Central Database Solution
- Management of cutting tool data for the entire end to end process
- Interfaces / Integration of many existing systems in the **Planning** and **Manufacturing** area
- Consistent tool data throughout the company on **Item**, **Tool Assembly** and **Tool List** level

TDM Systems

Software which knows your CNC Machine well

TDM Software Features

Optimised Processes facilitate structured and cost conscious provision on tools 24x7.

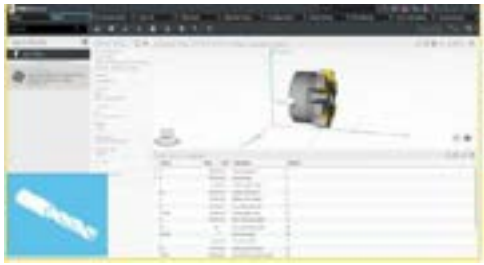

Intuitive Handling allows each tool cabinet to be controlled with an intuitive user interface.

Central Database the software evaluates the tool crib inventory levels of all connected cabinets, where by the database records dispensing with cost centre reference.

Cost Savings this tool management reduces costs by maintaining optimum tool crib inventories.

In depth tool know - how TDM Systems is only software provider world wide that exclusively develops solutions for managing tool data.

Our Actions

tdmsystems

AN INDO - GERMAN COLLABORATION

Our every Tool Management System is

Intelligent

and is equipped to

Adapt for all Phases of

Industry 4.0

Enabled

Phase - 1

Our solution can be interface to customer's ERP for data connect which enables visibility with reports and thus effective control.

Phase - 2

Our solution can be upgraded to interface with your Production Planning and Control Software for data based decision making. Example auto procurement, priority based tool issue etc.

Phase - 3

With Artificial Intelligence module loaded our solutions can predict tool consumption and new requirements based on past/ forecast data.

Phase - 4

Our solution can be upgraded to run different AI logics simultaneously and arrive at right decision based on the situation.

Phase - 5

Our machines work autonomously to dispense right tool in right quantity to right person at right time ensuring no human intervention in operations, save for service and maintenance.

Rail Guided Vehicle (RGV)

1 ASRS

Automated Storage and Retrieval System for raw material, work in progress and finished goods.

2 Vertical Carousel

To store and retrieve tools, documents in most compact space using the vertical height.

3 Mezzanine Floor

Space creation multi-fold for productive material storage and handling.

4 Conveyor Systems with AGV/RGV

For material transfer automatically from one point to defend point consistently in most productive and safe manner.

Creating an Eco-System

Aligning Academia towards Industry 4.0

Building Talent Reserve

Creintors Group in collaboration with Academia is attempting to bridge the gap between "Industry" and "Academia".

Digitisation and Automation demand is picking up for next Ten years. Presently easy access to right talent is a challenge for Industries. So we have a big task to bridge the gap between Academia and Industry. This initiative needs to be led by Industry as they need right talent. Industry should collaborate with nearest academia to create an Eco-System around its vicinity.

Creintors has initiated and is offering courses in Automation & Robotics for students of **Gogte Institute of Technology (GIT)**. We have developed the curriculum in line with the industry expectation and it is approved by Board of Studies as well as Academic Council of GIT as per the Autonomous norms.

In association with Japan International Cooperation Agency **(JICA)** and Confederation of Indian Industry**(CII)**, Creintors is offering **Visionary Learning Community of India(VLCI)** course for Engineering and Diploma Colleges. This Industry Oriented Flow Management Course recognised by **AICTE** is aimed to build the skills by applying the learning to Industry.
